

Sway Control Brackets

The unique rigid sway control brackets provide integrated 2-Point Sway Control™ through two points of linear steel on steel friction (better than brake pad material). The rigid brackets of the E2™ hitch's integrated sway control also eliminate the pendulum effect common in chains style hitches.

This time tested sway bracket design outperforms two (2) 'add-on' sway bars. **This improvement alone significantly reduces driver fatigue and stress while towing**, not to mention making it easier to use than any chain style hitch on the market.

PAT. PEND

The E2™ rigid sway control bracket system is easy to adjust, easy to install, and easy to understand. E2™ hitch's sway control brackets give you:

- * **Integrated 2-Point Sway Control™.**
- * **Elimination of Chains.**
- * **No Chain "snap-back" while unhitching.**
- * **No need to count chain links.**
- * **No pendulum effect caused by chains.**

IT JUST MAKES SENSE TO BUY INTEGRATED SWAY CONTROL!

What Makes the E2™ hitch Different?

MFG Part #	Max Tongue Weight	Max Trailer Weight
92-00-0600	600 Lbs.	6,000 Lbs.
92-00-0800	800 Lbs.	8,000 Lbs.
92-00-1000	1000 Lbs.	10,000 Lbs.
92-00-1200	1200 Lbs.	12,000 Lbs.

Integrated Sway Control

The NEW age of weight distribution!

www.e2hitch.com

Weight Distribution

Weight Distribution is essential to keep the tow vehicles front wheels in firm contact with the road. This improves steering and braking controls. This is important in helping the vehicle track and perform well while towing.

The E2™ hitch uses a trunnion style hitch head that combines simplicity and strength. This style of hitch head was chosen due to its simple maintenance schedule and the easy installation and removal of the spring arms.

Proper weight distribution is the foundation to a properly set up trailer configuration. Without it drivers experience highway hop, wandering steering controls, and sagging of the tow vehicle.

Without Weight Distribution

With Weight Distribution

Integrated 2-Point Sway Control™

Integrated Sway Control is an important component of a great trailering experience. Integrated sway control offers many benefits including no backing or turning restrictions, no weather restrictions, simple adjustability, and an easy to understand adjustment.

The choice to use Integrated Sway Control is possibly the single best choice to enhance your towing experience. So whether you use the E2™ hitch with 2-Point Sway Control™ or The Original Equal-i-zer® Sway Control Hitch, make sure you choose Integrated Sway Control.

Simply put Integrated Sway Control is sway control that is built into another function, such as weight distribution. Integrated Sway Control means that you will have sway control engaged whenever you are hitched up and towing.

A true Integrated Sway Control hitch is built with the dual functionality in mind, not as an afterthought. Integrated Sway Control devices do not include the old 'add on' sway bars or cam type attachments made to your existing style of hitch. The E2™ hitch utilizes unique sway control brackets to provide weight distribution and the 2-Point Sway Control™ system. Integrated Sway Control hitches minimize the extra tasks and adjustments that the driver will have to make when hitching up. Built with sway control in mind, the E2™ hitch is a great entry level choice for Integrated Sway Control.

Simple design, simple hardware,
and simple to use
all come together to make
your decision...
simple.

The E2™ integrated sway control hitch is warrantied against manufacturer defects for period of 3 years. To view and print instructions, find warranty information, and find out more on the E2™ integrated sway control hitch please visit: <http://www.e2hitch.com>
